# TECHNARTE
2018

A unique opportunity to meet and to network with artists and professionals creating and designing projects in the fields of interactive architecture and sculpture, human computer interaction, digital design, bioart, nanoart, robotics, gaming or immersive installations to name a few. Among the speakers will be the internationally recognized artists Jeroen Peeters, Sabine Faller, Daniel Leighton, Riccardo Torresi, Daniel Miller, Predrag Nikolic, Alex Beim, Przemyslaw Jasielski, OPN Studio, Vello Virkhaus, Cynthia Hua and Ryan Buyssens.

In Technarte, our main objective is to disseminate the importance of the fusion between art, science and technology as a way to develope each of the fields. Additionally, we seek to promote new opportunities at the creative market born from this union.

The Technarte International Conferences on Art and Technology have become a global reference for artists as well as professionals developing their careers in the artistic and technological fields.

Technarte has been held annually in Bilbao (Spain) for longer than 10 years and this is already the fourth edition of the International Conference in Los Angeles.

During the two-day annual conferences an immersive environment is created, both in terms of work and leisure, where everything revolves around Art, Science and Technology. It is a place to share, discover and enjoy.
